First, the focus is on port technical and operational measures that reduce GHG emissions on one hand and measures that improve energy efficiency on the other hand (the first in-depth ...

Maersk's network of port terminals connects our ocean and landside activities, making it a core focus area in our end-to-end decarbonisation strategy. With ambitious targets, we aim to lead the race to ...

In this paper, all available and future energy sources are assessed for ports. This study mainly concerns container terminals, but studies about cargo ports (e.g. bulk terminals) and cruise ...

The port of Moni is situated on the southern coast of Cyprus, between Limassol and Vassiliko. It includes an offshore CBM berth in an open roadstead that deals with heavy fuel oil ...

Specifically, we plan to install solar panels within the terminal with an eventual capacity of 2.5MW. The solar panels will reduce the port's emissions as they will produce clean energy for all customers and ...

The end-to-end trade company is taking concrete steps to reduce emissions by installing solar panels with an eventual capacity of 2.5MW within the terminal. The company is also in the ...

This article aims to explore the role of solar energy in sustainable shipping and ports, discussing its benefits, integration in port infrastructure, collaboration and partnerships, and future ...

This is the world's first smart zero carbon container terminal, which incorporates a distributed photovoltaic system across 16,000 square meters of rooftop and installs two wind ...
