Can a 6 kilowatt solar system power a house?

As the cost of solar panels continues to decline, 6 kilowatt (kW) solar PV systems are becoming a more popular option for homeowners. In many states, a 6kW PV system will be enough to power an entire house, but it depends on your location and energy needs.

How many solar panels do you need for a 6kW system?

A 6kW energy system has 15 solar panels. Depending on the wattage of the solar panels you choose to go with, the actual number of solar panels for your 6kW system will vary. Most solar panels today have a wattage of about 400 watts. For example, if you install 350-watt solar panels, you'll need about 17 panels to make a 6kW system.

Is a 6kW solar system too small?

Because the average U.S. home's monthly electricity usage is 875 kWh, a 6kW system might be too small for the power consumption of many homes. How much can I save with a 6kW solar system? Because every state has different rates for electricity, your savings will vary.

How much does a 6kW Solar System cost?

We will walk you through the cost, size, and practicality of a 6kW system before you decide to buy. How much does an average 6kW solar system cost? Based on the average cost of solar in 2025, a 6 kW solar system in the U.S. will cost about \$18,000. With the 30% federal tax credit, the solar system price drops down to about \$12,000.
