-----

Canberra could copy California's bill-credit rules tomorrow and finally make rooftop and community solar work for renters. Another quiet area where the US is ahead is grid-friendly buildings.

Australia has just set a new national record for battery output, but it is just a fraction of what is being seen in north American states like California.

What does California's success with battery storage mean for Australia? California's feat sets a precedent for Australia possibly achieving the same with renewables thanks to some similarities.

California has seen exponential growth in large-scale battery storage in the last five years, offering crystal ball gazing into what Australia's electricity system could look like in a few years' time.

The state's rapid ramp-up of battery storage is a good sign for Australia. With large solar farms and millions of rooftop solar arrays, Australian energy market operators have become familiar with the duck ...

The solar power plant, which features three 459-foot towers and thousands of computer-controlled mirrors known as heliostats, cost some \$2.2 billion (\$3.3 billion AUD) to build.

Sydney-headquartered energy infrastructure developer Energy Estate has acquired a Californian industrial complex expected to integrate large scale behind-the-meter solar energy to produce green hydrogen.

With large solar farms and millions of rooftop solar arrays, Australian energy market operators have become familiar with the duck curve.

SACRAMENTO - Today, California and Australia signed a Memorandum of Understanding (MOU), forging a new climate partnership between two of the largest economies in the world.
