Description: This UFC document provides requirements for designing and implementing interior telecommunications infrastructure for military construction. This infrastructure typically includes ...

The changes in construction represented by those cost increases are tabulated for reference, but they represent only representative construction that will meet the requirements of the design...

THESE STANDARDS ARE SUBJECT TO UPDATE AND MODIFICATION AT ANY TIME. PRINTED COPIES OF THIS MANUAL ARE PROVIDED AS A COURTESY, BUT MAY NOT INCLUDE THE MOST UP-TO-DATE ...

By setting specific guidelines and standards, state agencies can expect optimum performance from the telecommunications systems they purchase. The intent of this standard is to define requirements and ...

1B-3.1.1 To prevent damage to aircraft from construction-generated debris, the Contractor shall establish and maintain an effective FOD prevention program as an overall component of project execution.

Any new construction or modifications to these locations will meet the planning criteria in this chapter. If this is not possible, the new construction or modifications must conform to currently-waived criteria or have an ...

The Unified Facilities Criteria (UFC) Program provides planning, design, construction, sustainment, restoration, and modernization criteria for Department of Defense (DoD) facilities.

Contractors must be substantially complete with systems inside the communications equipment room so that access is generally not required. Minor punch list and scheduled testing with escort can be ...

Application: Suitable for the support of termination apparatus, cable and cord management apparatus, network equipment, and other similar equipment, within a telecommunications room.

# Construction standards and costs for field base station communication rooms

An equipment room (ER) is an environmentally controlled, centralized space for information technology communications equipment that typically houses a main or intermediate cross-connect.
