Can a photovoltaic bracket pile foundation meet different bearing capacity requirements?

Therefore, this paper aims to investigate the application of bionics principles to propose a novel type of photovoltaic bracket pile foundation designed to meet diverse bearing capacity requirements, specifically suited for desert gravel areas: the photovoltaic bracket serpentine pile foundation.

Does a photovoltaic bracket pile foundation withstand wind loading?

The traditional photovoltaic bracket pile foundation, while possessing high compressive strength, is susceptible to uplift forces under wind loading, leading to a host of issues 15.

How many pile foundations should a solar farm have?

The number of pile foundations can vary from a few thousand for a small solar farm to in excess of 100,000 for a large solar farm. Two issues are addressed in this paper. First, the relatively short lengths of the piles means that soil expansion and contraction are important factors.

Can helical piles be used in PV power plants?

In conclusion, numerous scholars have conducted extensive research on the use of helical piles, PHC piles, and bored pile foundations in PV power plants through field experiments, model experiments, and numerical simulations 25,26. These studies encompass corrosion prevention, construction, bearing capacity, and pile-soil interaction.
