What Google created is something they're calling the "dragonscale" solar skin, a first-of-its kind solar design that includes 90,000 silver solar panels with the capacity to generate nearly 7 ...

One of Google's newest buildings is using a building integrated photovoltaic (BIPV) product called Dragonscale, which is manufactured by European solar panel company SunStyle.

The latest noteworthy example is the "dragonscale" solar roof (pictured above) installed last month at Google's Silicon Valley campus. The tech giant is committed to green energy, but ...

A dragon-scale effect emerges from panels that stack vertically over each other to create this distinctive roof design. The architectural design achieves aesthetic beauty for the structure while ...

This unique roof system utilizes 50,000 solar panels arranged in a visually striking vertical stacking pattern that mimics the scales of a dragon. The result is not just an eye-catching ...

These panels coupled with the pavilion-like rooflines let us capture the power of the sun from multiple angles. Unlike a flat roof, which generates peak power at the same time of the day, our ...

When you name something "dragonscale" it will garner plenty of attention. Regardless of the name, the 50,000 photovoltaic panels topping the brand-new 1.1 million square foot Google office...

The dragon-scale effect arises from panels that stack vertically, creating a unique roof design that maximizes energy efficiency while achieving aesthetic beauty.

When you name something "dragonscale" it will garner plenty of ...

SunStyle tiles are manufactured with the highest quality PERC monocrystalline photovoltaic cells to maximize the efficiency of your roof. The traditional slate and shingle roofs in the Swiss Alpine region ...

Dragon scale photovoltaic panels

Another innovation we have brought to the Dragonscale roof is a highly textured prismatic glass tile with a unique coating technology. The prismatic quality of the glass traps the light that would normally ...
