NLR's multidisciplinary research, development, demonstration, and deployment drives technological innovation and commercialization of integrated energy conversion and storage solutions.

Energy storage strengthens our energy independence and national security by maximizing the use of affordable electricity produced in the United States, reducing the need for costly imported energy.

The DOE picked Argonne National Laboratory in Lemont, Illinois, near Chicago, to lead a new Energy Storage Research Alliance (ESRA).

This paper provides a novel perspective on the state of energy storage technology by synthesizing data from reputable sources such as the International Energy Agency (IEA) and the ...

As the U.S. transitions toward a cleaner energy future, these projects not only reflect advancements in energy storage technology but also demonstrate a commitment to reducing ...

Energy models are simplified representations of energy production and consumption, laws and regulations, and producer and consumer behavior. Projections are highly dependent on the ...

State-owned energy company Synergy has completed the 500MW/2,400MWh Collie Battery Energy Storage System (CBESS) in Western Australia, establishing Collie as home to Australia's largest ...

To that end, OE today announced several exciting developments including new funding opportunities for energy storage innovations and the upcoming dedication of a game-changing new ...

Latest news on energy storage projects, BESS, capacity expansion, and regulatory updates across Europe, US & Canada, Latin America, and Asia Pacific. Discover how energy ...

# Energy Storage Agency New Energy Project

From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid.
