This section reviews the policy options available to Iran to reform its energy sector, concluding that energy subsidy reforms, energy efficiency improvements, and targeted investments ...

Natural gas and oil accounted for almost all of Iran's total primary energy consumption, and hydropower, coal, nuclear, and non-hydropower renewables accounted for the remaining shares (Figure 2).⁹

To comprehensively evaluate Iran's energy transition pathways and address the identified challenges of fossil fuel dependency, climate change impacts, and electricity shortage, this research ...

Iran has the second-largest natural gas reserves and the fourth-largest oil reserves in the world; yet, it is experiencing a severe fuel crisis that is interfering with daily life, halting industrial ...

Iran's largest source of clean electricity is hydro (6%). Its share of wind and solar (0.5%) is well below the global average (15%). Iran relied on fossil fuels for 92% of its electricity in 2024. Its ...

Characterized by excessive reliance on fossil fuels and frequent power outages, Iran has a lot of unrealized potential when it comes to renewable energy, especially solar and wind power, but ...

It proposes a strategic shift toward renewable energy sources, especially solar and wind carriers, outlining necessary domestic and foreign policy changes to facilitate this transition. The...

To achieve this, Iran must implement realistic energy pricing, invest in renewable energy infrastructure, and promote energy conservation practices among its populace.

Iran is at a critical juncture regarding its energy and environmental sustainability. The country faces severe energy shortages, particularly during peak seasons, due to an aging and ...

Trends of Iran's Energy System Updated November 2025. This page steps through Iran's energy system, from

Energy conservation iran

fossil fuel emissions, to fossil fuel production, primary energy, final energy, and ...
