Victoria's independent infrastructure adviser has warned the failure to secure long-duration storage capacity poses a high risk to the state's energy transition that could lead to higher...

In response to this pressing issue, phase change materials (PCM) have emerged as a promising solution due to their outstanding thermal energy storage (TES) capabilities.

The Ballarat Energy Storage System provides back-up power and grid stabilisation, vital to maintaining a reliable and affordable energy supply in Western Victoria.

The paper reviews energy storage technologies and their applicability to the Australian National Electricity Market (NEM). The increasing dynamic variability between maximum and ...

Energy storage systems are a critical tool in this transformation, offering a more dynamic and reliable approach to demand management. Traditional demand response programs rely on utility...

Victoria's legislated energy storage targets are: at least 6.3 GW by 2035. The energy storage targets will include short, medium and long duration energy storage systems, allowing ...

By shifting supply and demand patterns, storage and demand response can not only significantly increase the penetration of VRE, but also can provide other significant sources of value such as ...

Victoria welcomes investment in a range of energy storage technologies, including short, medium and long duration storage. As planned coal generation closures occur, delivering long duration storage ...

Determine the most efficient policy or investment options to provide enough long duration energy storage to meet Victoria's needs. Victoria's 3 remaining coal power plants need to close by 2035 to ...
