-----

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched on Wednesday by LCP ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...

Members of the European Parliament are calling on the European Commission to propose an EU strategy on energy flexibility - an initiative backed by SolarPower Europe.

SolarPower Europe warns that, despite projecting to reach 400 GWh by 2029, the region needs at least 780 GWh to meet its energy flexibility goals. Battery storage is no longer an optional ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

Launched in March 2025, it is the first European-level tool of its kind, providing a real-time dashboard of energy storage levels in Europe, offering energy storage data across a full range ...

This new annual EU Battery Storage Market Review is designed to serve as a reference point to observe, analyse, and guide the technology's progress.

With 89 GW of installed capacity as of 2024, Europe is consolidating its energy transition through an unprecedented growth in storage technologies, led by pumped hydro and electrochemical ...

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...
