Perfectly suited to any application that requires a high-rate current over a short period, this series combines proven high temperature technology and exceptional service life.

The construction characteristics of the recombination type lead-acid electric accumulators (valve-regulated hermetic accumulators); the absence of acid fumes and the virtual absence of gaseous ...

This course describes the hazards associated with batteries and highlights those safety features that must be taken into consideration when designing, constructing and fitting out a battery room. It ...

Designed to deliver reliable, high-performance output even in elevated temperatures, the Calor XHT helps future-proof your power infrastructure against today's toughest challenges.

Engineered for use with most type of battery terminal models, these cabinets can fit a wide variety of applications. This solution is completely customizable and flexible to support your application ...

In addition to its Thermal Management Technology, Deka Fahrenheit batteries feature East Penn's exclusive IPF ® (Individual Plate Formation) Technology, full recycling capabilities and front access ...

Optimum ambient temperature is defined by the battery manufacturer, but usually ranges from 20°C to 25°C (68-77°F). Higher room temperatures increase off gassing and shorten battery life.

The IP55 rated outdoor battery cabinet can effectively control the inner ideal temperature of the cabinet and make the lead acid battery run in an ideal temperature condition.

East Penn Manufacturing, Co., Inc. has released the Deka Fahrenheit, a heat-tolerant VRLA (Valve-Regulated Lead Acid) monobloc battery. The Deka Fahrenheit is designed to survive in the ...

High-Temperature Solution for Lead-Acid Battery Cabinets

There are two types of lead acid batteries: vented (known as "flooded" or "wet cells") and valve regulated batteries (VRLA, known as "sealed"). The vented cell batteries release hydrogen continuously during ...
