Initially, water was the primary coolant, as it was readily available and effective in reducing temperatures. However, as manufacturing techniques advanced and machinery became ...

The first engine coolant was invented in 1929 by BASF under the brand Glysantin, marking a significant advancement in vehicle maintenance. Before coolant, engines were almost ...

An Odyssey of Engine Perfection Unraveling the History of Coolants: to life, but temperature extremes threatened their very existence. Ingenious minds embarked on a quest

But have you ever wondered when coolant was first invented? In this article, we'll take a journey through the history of coolant, exploring its development, evolution, and impact on our daily ...

Liquid coolants (usually a half and half mixture of water and ethylene glycol (EG) based antifreeze) are used to manage heat in automotive internal combustion engines. The coolant helps prevent ...

It provides an overview of the history of coolant, the composition of modern coolants including glycol and additives, and the key functions of coolant in absorbing heat, circulating it, dissipating it to control ...

Coolant, a mixture of antifreeze and water, helps regulate engine temperature. The first application of ethylene glycol antifreeze was proposed in the UK, and in 1927, the Prestone brand ...

In order to extend the life of your coolant, industry leaders began to develop Organic Acid Technology (OAT) coolants in the late 1980s. Using some variation and mixture of borate, nitrate, phosphate, or ...

History of coolant

ideal coolant has high thermal capacity, low viscosity, and low cost, is non-toxic and chemically inert, and neither causes nor promotes corrosion of the cooling system. Some applications also require the coolant to be an electrical insulator. While the term coolant is commonly used in automotive and HVAC applications, in industrial processing

The story of coolant begins in the late 19th century with the development of refrigeration. The need for refrigeration was initially driven by the desire to preserve food and improve sanitation.
