Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Find up-to-date statistics and facts on the global solar photovoltaic industry.

This interactive chart shows the amount of energy generated from solar power each year. Solar generation at scale - compared to hydropower, for example - is a relatively modern renewable ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

Solar's Share of U.S. Energy Production Rises Across States Solar's share of U.S. electricity generation has risen from less than 0.1% in 2010 to over 8% today. Solar has grown to play an increasing role in ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

Data and analysis including a list of solar power in every country in ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

Wind, nuclear, hydro, and solar together account for more than one-third of capacity. 468,582 MW of new generation capacity is under development in the United States, which is comparable to the total ...

There were 514,000 new residential solar systems installed in 2021, a 30% growth rate year on year. A further 13% growth in installations is projected for this year.

How many solar power generation systems are there

Three-quarters of new generation capacity is solar, [3] with both millions of rooftop installations and gigawatt-scale photovoltaic power stations continuing to be built.
