The world installed 117 gigawatts of new wind power capacity in 2023, a 50% increase from the year before, making it the best year for new wind projects on record, according to a new ...

The Global Wind Report 2024, newly released by the Global Wind Energy Council representing the entire wind energy sector, found that the 117 GW of installations in 2023 represent a ...

A report from a leading wind power trade association said a record 117 GW of new wind energy generation capacity was installed worldwide last year, a 50% increase from the prior year.

U.S. wind capacity increased steadily over the last several years, more than tripling from 47.0 GW in 2010 to 147.5 GW at the end of 2023. Electricity generation from wind turbines also grew ...

According to preliminary statistics published today by the World Wind Energy Association, global wind power capacity has now passed one million Megawatt and has reached ...

Reporting issued by the Global Wind Energy Council reveals that 2023 was the best year on record for the wind industry, with 117 gigawatts (GW) of new wind power capacity--a 50% ...

Despite adding wind capacity, wind generation declined almost 3 percent in 2023 due to low wind speeds. Fossil fuels, mainly coal and natural gas, still accounted for around 59 percent of ...

Wind power has more than doubled this decade, with 425,325 GWh coming from wind installations across the country in 2023. Together, these two renewable energy sources generated ...

Wind power facilities account for the largest share of the country's renew-able energy production, providing 10.2% of electricity generated in 2023 [4]. Total installed wind power capacity in the United ...
