Can I add more container units to my energy storage system?

Each container unit is a self-contained energy storage system, but they can be combined to increase capacity. This means that as your energy demands grow, you can incrementally expand your CESS by adding more container units, offering a scalable solution that grows with your needs.

What is a containerized energy storage system?

A Containerized Energy-Storage System, or CESS, is an innovative energy storage solution packaged within a modular, transportable container. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as from the grid during low-demand periods.

How does an inverter work?

This energy, stored as direct current (DC) electricity, is directed to an inverter, which transforms it into alternating current (AC) electricity. AC is the standard form of electricity used by most electrical appliances and devices, making the inverter a crucial link in making the stored energy usable.
