---

Huawei promises that its battery technology could deliver around 1,864 miles of range and achieve a 10% to 80% charge in under five minutes.

The battery uses a sulfide-based electrolyte and a lithium-metal anode, promising better ionic conductivity compared to other solid-state battery cells.

Huawei's lithium battery solutions enable intelligent energy storage and peak shifting, upgrading backup power systems to improve flexibility and reliability.

Huawei has filed a patent for next-generation solid-state battery technology, aiming to revolutionize the innovation of electric vehicle (EV) batteries.

Smartphone giant and EV investor Huawei has challenged CATL and BYD's supremacy by inventing a pioneering new battery that blends an incredible range of up to 3000km with a ...

Tech giant Huawei has reportedly filed a groundbreaking patent for a solid-state EV battery that could completely redefine the playing field.

According to the patent, Huawei is developing a solid-state battery architecture with an energy density between 400 and 500 Wh/kg--reportedly three times higher than that of conventional ...

Even though Huawei doesn't manufacture batteries, the company is putting plenty of R& D resources into developing a new solid-state battery tech. The newest patent reveals a battery pack that can go for ...

Huawei is the latest in a growing list of automakers and tech companies that are exploring the possible benefits of fitting an EV with solid-state batteries, with the likes of BMW,...

## Huawei packs a full set of lithium battery equipment

Huawei has joined the debate about future-generation electric cars with a pretty radical suggestion: a battery system that might charge an EV for more than 3,000 kilometres.
