---

In many areas, this practice continues today. In rural areas, and areas served by volunteer agencies, basing the ambulance at a station is the only system that makes sense. In urban areas, however, it is ...

Over the last years, many review papers have discussed emergency medical services (EMS) location problems, however, only few review papers consider the full range of EMS systems. ...

The most expensive part of EMS service delivery is the cost of readiness, that is, having enough resources available (i.e., not committed to a response) to meet the community's desired 911 ...

In this study, a multi-period capacitated facility location problem with maximum travel time and backup service (EMSLSP) is proposed for locating and sizing EMS stations.

Variability in base station medical direction and a lack of standardized training for base station physicians/directors contribute to coordination challenges.

Maryland's designated EMS Base Stations provide quality on-line medical direction to the State's EMS clinicians. The following information comprises a toolbox for EMS Base Station staff to sustain and ...

As Austin, Texas, continues its rapid growth, the City of Austin (COA) recognized a critical need for more fire and EMS stations to ensure all residents were receiving emergency ...

This paper presents a novel decision support framework for optimizing EMS station layout. Employing the k-means clustering algorithm in combination with the elbow method and ...

EMS.gov's new Resources hub makes it easy to search for and browse a wide variety of documents, reports,

# Is it still necessary to build EMS base stations when EMS base stations are saturated

guidelines and policies created by the Office of EMS, our partners, and other stakeholders.

Effective EMS operations are crucial for delivering prompt and effective healthcare. However, the landscape of EMS operations is constantly evolving, posing a number of challenges that...
