-----

We perform all the necessary steps for creating both overhead and underground infrastructures, as well as installing and maintaining local, subscriber or interconnection networks.

This Outdoor Telecom and Solar Electrical Enclosure is designed to house and protect communication equipment, solar controllers, inverters, batteries, and electrical distribution systems in one integrated ...

The Syston EMS division offers comprehensive manufacturing solutions for clients in the electronics and box-building sectors, leveraging extensive experience in OEM, EMS, and CMS across medical, ...

As its name suggests, Solar XXI was created with the objective of making extensive use of solar exposure. The building is constructed to provide high internal thermal capacity with 5 cm expanded ...

The proposed activities/lines rely on the large experience of the RI team members at national and international level, in the area of energy in buildings and solar energy systems.

The different systems - photovoltaic, solar collectors, ground cooling - are integrated by a pragmatic design as neutral as possible, a laconic architectural solution in order to emphasize the ...

Working rooms are located at the South facade, while labs and less permanently occupied rooms are on the North facade. In the central zone of the building the corridor provides a central ventilation and ...

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

They transform solar-sourced DC into AC and store unused energy in high-performance battery packs, providing clean, renewable backup energy to mission-critical telecom equipment.

ems, qualifies the Solar XXI building for ex-emplary energy performance. Solar XXI building energy performance is about ten times he energy performance of a standard new office building in Portugal ...
