-----

A significant lithium find in Southwestern Arkansas could hold up to 19 million tons of lithium, an essential component for electric vehicle batteries, energy storage systems for renewable ...

In a groundbreaking discovery that could reshape global energy dynamics, scientists have identified a massive lithium deposit in the McDermitt Caldera, potentially challenging China's ...

Suspended in the relic of an ancient sea beneath southern Arkansas, there may be enough lithium for nine times the expected global demand for the element in car batteries in 2030.

Beneath the surface of California's Salton Sea lies a discovery so massive it could redefine the nation's clean energy future. Scientists have identified an astonishing 18 million tons of...

A study released this week by the USGS finds the Smackover formation in Southern Arkansas may contain 9 times the estimated global demand for lithium through 2030.

Experts estimate this colossal deposit contains enough lithium to satisfy worldwide demand up to ten times over, potentially reshaping the entire battery supply chain. This unexpected ...

What just happened? What is likely to be the world's largest deposit of lithium has been discovered in a volcano crater along the Nevada-Oregon border.

Using innovative water testing methods combined with machine learning, researchers estimate the region contains between 5 and 19 million tons of lithium reserves--enough to meet ...

A fresh discovery in southwestern Arkansas might reshape how manufacturers secure this essential metal for batteries. Researchers say the area could hold as much as 19 million tons of ...

A stunning \$1.5 trillion lithium deposit has been discovered beneath a long-dormant supervolcano in Nevada,

# Lithium discovery in america

potentially making the U.S. one of the largest lithium producers on Earth.
