At the heart of the project was the establishment of a state-of-the-art liquefied natural gas (LNG) facility, a new power plant, complemented by the conversion of existing oil-fired power stations ...

Energy production includes any fossil fuels drilled and mined, which can be burned to produce electricity or used as fuels, as well as energy produced by nuclear fission and renewable power sources such ...

This project, aimed to increase the indigenous renewable energy portion in Malta's energy mix, fits perfectly with our vision for the sector and will contribute to the government's aim of ...

During a grid blackout, the BESS at Delimara may be requested to provide support by independently restarting sections of the grid, ensuring grid resilience by providing critical initial power to facilitate the ...

This format offers a portable, weatherproof, and secure power generation unit that is ideal for a wide range of industrial, commercial, and emergency backup applications.

Domestic power generation relies primarily on natural gas, delivered via an LNG facility with a floating storage unit located near the power plants.

While Malta may not have significant wind resources, the potential for nuclear power, along with an expanded solar network, could play a pivotal role in increasing low-carbon electricity generation and ...

Malta's innovative thermoelectric energy storage system offers a flexible, cost-effective and scalable solution for the storage of energy over long periods of time.

While the shift has delivered environmental benefits, with greenhouse gas emissions from power plants falling by 7.8%, it leaves the island increasingly exposed to potential disruptions in ...

Since 2015, the Malta-Sicily interconnector allows Malta to be connected to the European power grid and

Malta power generation container

import a significant share of its electricity. At 4.9%, Malta had the lowest share of renewables as ...
