In this article, the common approaches for decentralized and distributed control are reviewed, and the current design trends and critical technical challenges are discussed to offer a ...

To fulfill the requirements of coordination between MGs while exerting the autonomy ability of each MG, this paper proposes a hierarchical distributed control method for DC MGCs with ...

In this work, an overview of the state-of-the-art of distributed cooperative control systems for isolated microgrids is presented. Protocols for cooperative control such as linear consensus, ...

The aim of this chapter discusses the relationship between hierarchical control and review of distributed control systems that is used in microgrids. The microgrids are differs from the...

Unlike traditional generators, DGs are installed near consumption sources, allowing for local energy production. Some advantages of distributed generation are a reduction in losses, self ...

Model Prediction Control (Mpc)--Based Method Consensus-Based Method Multi Agent-Based Method Decomposition-Based Method Droop-Based Method Distributed control optimization is focused by distributed computing, where every unit of microgrid exactly knows of the common goal and examining it under the term compromise. A promising consensus approach about expandability and scalability for the solution of distributed optimization problems are given in [30, 31]. The purpose of the consensus ... This research critically reviews the DCT strategies developed for MGs, presents various MG control strategies, and delves into different approaches to designing distributed controllers.
