From rural homes adopting rooftop systems to businesses securing power for production, solar is becoming a core part of the country's future. The momentum is building, and the opportunity ...

By combining robust regulatory frameworks, accessible financial mechanisms, and strong international partnerships, Moldova is creating a resilient and locally controlled energy system.

By the end of 2025, two large-scale photovoltaic power plants will be built in the Republic of Moldova, increasing the total installed capacity of renewable energy sources by 90 MW.

The turning point came around 2019, but the pace skyrocketed due to the Moldova energy strategy 2026, which supported incentives and subsidies for solar power installation Moldova.

This regional push is bolstered by global trends. According to industry analysis, solar PV technology remains the most cost-competitive source for new power generation globally in 2025. ...

A construction of a photovoltaic power plant with an installed capacity of 22 MW, equipped with an electricity storage system of 16,512 MWh has been today approved by The ...

The two solar parks will employ cutting-edge photovoltaic technology, incorporating the latest advancements in solar panel efficiency and energy storage systems.

At GRATA Moldova, we are dedicated to safeguarding your investments in the rapidly evolving renewable energy landscape of Moldova. Our team is committed to providing expert ...

Moldova has proposed an ambitious strategy to increase energy production from renewable sources. The state will provide potential investors with tools and facilities to attract them to invest in green ...

Today about 400MW of renewable energy capacity has been installed in the Republic of Moldova - of which

Moldova Solar Power System

about 230MW of solar PV, and 170MW of wind capacity. To reach net-zero by 2050, the ...
