Scrolling further down reveals the state dashboard, where users can select individual states to view data on small-scale solar energy production, the equivalent number of average ...

Most U.S. states require utilities to credit residential solar photovoltaic (PV) output at the retail electricity rate, a structure known as net metering. However, 12 states have replaced net ...

Environment America made a series of policy recommendations for states and local governments to help tap the massive potential of U.S. rooftops in a recent report. First, it ...

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

Expressly defining solar energy systems in the "definitions" section of the zoning code, providing definitions for the energy system type (e.g., rooftop, ground-mounted, and building ...

Modern building codes and regulations increasingly view rooftops as valuable real estate for renewable energy generation. From California's pioneering solar roof mandate to innovative ...

SEIA is engaged with policymakers at the regulatory and legislative levels in Washington, D.C. and across the country to establish supportive policy frameworks that allow solar to compete in the ...

The intent of solar energy ready requirements is to provide a penetration free and shade free portion of the roof, called the solar zone. This helps ensure future installation of a solar energy system is not ...

According to National Renewable Energy Laboratory (NREL) analysis in 2016, there are over 8 billion square meters of rooftops on which solar panels could be installed in the United States, representing ...

National policy on rooftop photovoltaic panels

NFPA 1 provides guidance on how solar photovoltaic panels must be installed on the roofs of homes.
