South Africa is facing a monumental challenge as it seeks to end years of rolling electricity outages that have hobbled the economy: It needs to build and fund a 390-billion-rand (\$21 ...

Chinese state-owned companies are among several international firms to bid on South Africa's \$25 billion grid expansion, vying to build the lines and then make money, in part, by operating...

African countries in this project can be grouped into three electricity generation profiles: dominant fossil fuels (mainly gas) with hydro as a secondary source; strong clean electricity with hydro and fossil ...

Although nine in 10 South Africans are connected to the national electricity grid, power cuts in the country are frequent. Poor, dense urban areas like Mr. Munghabe's are hit particularly...

te climate impacts. The passing of the Electricity Regulation Amendment Bill indicates a legislative commitment to improving infrastructure maintenance and ensuring reliable electricity supply. This ...

By interconnecting national grids, African countries could trade electricity among themselves, just as they trade goods and services, allowing them to share electricity during peak ...

South Africa's electricity ministry selected seven groups of companies as pre-qualified bidders for the country's transmission-grid expansion program.

In South Africa, many low-income families who've never had electricity can't afford solar power. Solar mini-grids could help.

South Africa's electricity grid was never designed to support a decentralised, renewable-powered economy. Originally built to transmit power from centralised coal-fired power plants in...
