According to a State of Environment Report prepared by the United Nations Environment Programme (UNEP) in cooperation with North Korea in 2003, there have been improvements in the sustainable ...

Summary Overview Biodiversity Environmental issues Environmental programs The environment of North Korea comprises the diverse ecosystems of the part of the Korean peninsula controlled by the Democratic People's Republic of Korea. This includes alpine, forest, farmland, freshwater, and marine ecosystems. Since the 1980s, the environment has been reported to be in a state of "crisis", "catastrophe", or "collapse". Pollution and deforestation are key problems. However...

This suggests that North Korea's massively propagandized construction efforts over the past years were more for show than anything else. Read the full story here, in The Diplomat magazine...
