What is a solar photovoltaic power plant?

A solar photovoltaic (PV) power plant is an innovative energy solution that converts sunlight into electricity using the photovoltaic effect. This process occurs when photons from sunlight strike a material, typically silicon, and displace electrons, generating a direct current (DC).

What is a photovoltaic power station?

A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power.

What are some examples of solar photovoltaic power plants?

In addition to conventional solar plants, photovoltaic systems installed on the roofs of buildings known as solar communities, which generate electricity for self-consumption and reduce energy costs, or solar farms, are two great examples of solar photovoltaic power plants. At Repsol, we have several photovoltaic projects:

What are the components of a photovoltaic power plant?

A photovoltaic power plant consists of several components, such as: Solar modules: The basic units of a PV system, made up of solar cells that turn light into electricity. Solar cells, typically made from silicon, absorb photons and release electrons, creating an electric current.
