China's top economic planning agency said on Sunday it was taking steps to scale back subsidies for renewable energy projects after a boom in solar and wind power installations.

The reduction in subsidies could place additional strain on China's solar industry, which is already grappling with overcapacity and plummeting panel prices that threaten the viability of smaller ...

To absorb the rapid growth of PV power generation, these subsidies were terminated in 2013 and then switched to feed-in tariffs or based on the kilowatt hours of power ...

Funding for solar power generation in rural areas has seen a tenfold increase, rising from 30 million yuan to 300 million yuan (US\$41 million). The program incentivizes individuals and ...

While this shift may promote efficiency among larger players within China's solar industry, it raises concerns for smaller producers who might struggle under increased competition without the ...

The PV power generation subsidy budget was scaled back to 1.5 billion CNY in 2020, with one-third earmarked to bolster the development of household PV. The feed-in tariff for LSPV and ...

Reduced solar subsidies could add pressure on China's solar industry, where overcapacity relative to global demand has led to a drop in module prices.

Decreasing photovoltaic (PV) power generation subsidies changes the PV market and may bring unforeseen impacts on enterprises and their industrial chain.

Let's unpack the current photovoltaic subsidy landscape - it's like watching a high-stakes solar-powered marathon where provincial governments sprint to outshine each other.

Qianguo solar power generation subsidies

The Chinese government announced subsidies for renewable electricity generation from wind, solar, and biomass for local public utilities and power generation companies in 2024, with the decision made on ...
