-----

Lithuania expects to reach its national target under the Effort-sharing Regulation (ESR) to reduce emissions in 2030 by 21 % below 2005 levels, despite exceeding annual emissions allocations in ...

Set national mid-term target: reduce total GHG emissions by 30 % by 2030 compared to 2005. Setting the timelines on phasing out of fossil fuels in different sectors. Removing fossil fuel subsidies.

By partnering with neighbouring countries, like Latvia and Poland, Lithuania could temporarily store CO<sub>2</sub> offshore, creating a network for regional decarbonization efforts.

Lithuania's intermediate and long-term climate commitments essentially are composed of the 70% greenhouse gas (GHG) emissions reduction target by 2030 compared with 1990, and achieving ...

Explore carbon removal policy in Lithuania. Track strategies, funding, and how CDR is emerging in national climate policy frameworks.

In recent years, Lithuania has made significant strides towards reducing its greenhouse gas emissions through a combination of robust government policies and international commitments.

Lithuania is highly dependent on energy imports and its gross GHG emissions have hardly declined since 2000, despite significant decoupling from GDP growth. Accelerating the green transition will be ...

Lithuania has made a pledge to reduce its greenhouse gas emissions by at least 70% by 2030. This commitment, announced at the United Nations Climate Change Conference, is symbolic of a ...

Following the EU's lead on energy and climate policy, Lithuania has adopted national climate change mitigation targets, declaring its ambition to reduce GHG emissions by 50 % in the ...

On Wednesday, at the United Nations Climate Change Conference (COP29) in Azerbaijan's capital, Minister
