NLR's PV cost benchmarking work uses a bottom-up approach. First, analysts create a set of steps required for system installation. Next, they calculate the hardware, equipment, direct ...

It might seem counterintuitive for petrochemical industrial facilities to look to renewable solar energy for their operations, but for a growing number of refineries, it just makes sense for two ...

This study investigates the issues and challenges surrounding energy storage project and portfolio valuation and provide insights into improving visibility into the process for developers, capital ...

California's Self-Generation Incentive Program (SGIP) provides substantial financial support for businesses installing battery storage. The program includes a combination of upfront ...

The study explores the feasibility of incorporating solar, wind, and biomass energy sources alongside the existing Natural Gas Combined Cycle (NGCC) power plant and grid connection to ...

With this business model, the host customer buys the services produced by the PV system rather than the PV system itself. This framework is referred to as the "solar services" model, ...

Determine whether a given site is technically-suitable for solar, how much solar capacity it can host in relation to the power consumption of the host or adjacent government facilities, and if there are ...

Power Purchase Agreement (PPA) You pay Enel X a single payment rate based on energy generation from the solar panels and the overall benefit of the solar + storage system.

This is an extract from a recent issue brief "Energy Storage Incentive Rate Setting for States" prepared by

Single-phase installment payment for solar energy storage cabinets used in oil refineries

Clean Energy Group and Clean Energy States Alliance.

As states increasingly adopt energy storage targets, develop storage policy and regulation, and seek to drive energy storage deployment, numerous incentive programs have emerged. These vary greatly ...
