Why do solar companies go bankrupt?

Companies without a strong differentiation or diversified business model are being squeezed out of the market, leading to more solar company bankruptcies. High-profile closures like Pink Energy illustrate how bad installations, customer complaints, and poor system performance can quickly snowball into financial failure.

Will a solar company go bankrupt in 2025?

The expiration of the 30% residential solar tax credit after December 31, 2025--and the commercial tax credit soon after--could push more companies into financial distress, accelerating the trend of solar company bankruptcies in 2025. If you have a system installed by a solar company out of business, GreenLancer can help.

Which state is most affected by solar company bankruptcies & business closures?

California was the most affected state by the number of solar company bankruptcies and business closures in recent years. This fact can be easily explained by the way the industry developed there, as well as the extreme policy changes that occurred. California was the first state to adopt solar energy in the U.S.
