---

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

Electricity generation from solar, measured in terawatt-hours.

Is there such a thing as too much solar power? Find out what happens when your system produces more energy than you use.

Wondering where excess solar energy goes? Learn how solar panels produce extra power, how to store or sell it, and tips to maximize your solar savings today.

The increase in solar and wind power outpaced global electricity demand growth in the first half of 2025. Solar alone met 83% of the rise, with many countries setting new records.

While high electricity prices - and new incentives that increased the economic attractiveness of residential and commercial systems - accelerated the expansion of solar PV in 2022 and 2023, ...

In this comprehensive guide, we'll explore 12 proven strategies for maximizing your excess solar power, from immediate consumption optimization to advanced storage solutions and ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Another challenge with high solar adoption is the potential for PV to produce more energy than can be used at one time, called over-generation. This leads system operators to curtail PV ...

Generation from nonhydro renewable energy sources (solar, wind, geothermal, and biomass) reached a new

# Solar power generation exceeds electricity consumption

milestone, exceeding generation from hydropower and contributing ~16% of global electricity, ...
