As a pioneer in "solar power for shipping", Wattlab provides fully integrated solar products tailored for both seagoing and inland vessels - including the Solar FlatRack and the SolarHatch.

The ship single-phase photovoltaic power generation system mainly comprises the photovoltaic power generation system, the grid-connected inverter, and the filter inductor.

This paper will review several studies and applications of solar energy as part of ship power system, and analyze the contributions in supporting reduction of carbon emissions.

Marine solar panels are designed to withstand the harsh conditions at sea & are suitable for all vessels ranging from small pleasure craft to ocean-going passenger ferries & cargo ships.

Advances in materials science and engineering are yielding more robust, efficient and cost-effective solar technologies specifically designed for maritime applications.

The algorithm was evaluated using a ship model equipped with a hybrid power system that included a generator, energy storage system, solar cells, service loads, and a propulsion system.

A maritime solar energy company in the Netherlands has just installed the world's first full-scale solar energy system on a seagoing cargo ship making a great step forward for sustainable...

In this paper, the technical features of of-grid and grid-connected type ship-based PV systems are analysed. From the viewpoint of engineering application, the corresponding critical technical and ...

Dutch maritime solar innovator Wattlab has delivered a seaworthy solar energy system for a diesel-electric vessel owned by compatriot shortsea shipping company Vertom.

Solar power generation system for sea vessels

Abstract - In this research article, a coordination method for Battery energy storage system (BESS) and ultra-capacitor is proposed for a Solar PV integrated ship power system.
