A screen near the Energy Museum and Mindaugas Bridge indicates that on February 8 the Baltic States will disconnect from the Russian electricity grid to synchronise with Continental Europe, in...

Since 2022, they have ceased to import electricity from BRELL, but this nevertheless represents a momentous change that will provide the Baltic states with greater independence and energy stability.

Estonia, along with Latvia and Lithuania, is set to disconnect from the Russian electricity grid in early February, marking a significant step towards full energy independence.

For the Baltics, energy independence means diversifying energy suppliers and diversifying the energy mix, plus the ability to integrate more renewables like solar and wind energy. It also...

From the first ten days of February 2025, Estonia, Latvia and Lithuania mark a turning point in their energy history by becoming fully independent from the power systems of Russia and Belarus.

Once heavily dependent on Russian energy, the Baltic states - Estonia, Latvia, and Lithuania - achieved full independence from Russian electricity and gas on February 8, 2025. This milestone marks a ...

TALLINN - On Feb. 8, Estonia, Latvia and Lithuania will take a historic step by disconnecting their electricity networks from the Russian grid and temporarily switching to operation in island mode.

On 8 February 2025, the Baltic states of Estonia, Latvia, and Lithuania successfully disconnected from the Russian power grid and integrated into the European Union's energy network.

Estonia, Latvia, and Lithuania have officially disconnected their electricity systems from Russia's as the Baltic countries seek closer ties with the European Union and better national security. The move ...

On February 8, Estonia, Latvia and Lithuania will simultaneously disconnect from that grid, at which point

Tallinn energy independence

they will need to briefly function as an "island," surviving only on the electricity...
