Which energy sources will grow in 2025 & 2026?

In contrast to solar and wind, generating capacity for most other energy sources will remain mostly unchanged in 2025 and 2026. Natural gas-fired capacity growth slowed in 2024, with only 1 GW of capacity added to the power mix, but natural gas remains the largest source of U.S. power generation.

How much solar power will the US add in 2025 & 2026?

The EIA projects that US utilities and independent power producers will add 26GW of solar capacity to the electric power sector in 2025 and 22GW in 2026. This follows a record-setting 37GW of solar power capacity added in 2024, almost doubling the capacity additions of the previous year.

Will solar power grow in 2027?

Credit: Todor Stoyanov-Raveo/Shutterstock. The US Energy Information Agency (EIA) has forecast that power generation growth in the country up to 2027 will be driven predominantly by solar capacity additions, in its latest short-term energy outlook.

Is solar power the fastest growing source of new electric generating capacity?

"Solar power is the fastest-growing source of new electric generating capacity in the United States, driven by large-scale solar photovoltaic (PV) projects built by electric utilities and independent power producers," the agency reminds everyone.

Space-based solar power: A new frontier in US energy security by David Steitz and Sowmya Venkatesh Monday, June 9, 2025 Space-based solar power (SBSP) represents a crucial ...

Solar power really is the fastest, most economical way to address the "energy emergency" declared by US President Donald Trump.

The future of energy generation in the United States is set to undergo a significant transformation, with solar power and battery storage leading the charge. In 2025, the U.S. is ...

In contrast to solar and wind, generating capacity for most other energy sources will remain mostly unchanged in 2025 and 2026. Natural gas-fired capacity growth slowed in 2024, with ...

# The United States proposes to build a solar power station

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the grid, accounting for 61% of new ...

According to the U.S. Energy Information Administration (EIA), the country is set to add a record 63 GW of new power plant capacity in 2025--93% of which will come from carbon-free ...

Explore 4150 planned solar projects in the US expected online 2025-2027. Interactive map shows proposed projects by capacity. Updated February 2026.

The U.S. is on track to build a record-breaking 63 gigawatts of new power capacity in 2025, as demand for energy surges. Almost all of this new capacity will come from carbon-free ...

The US Energy Information Agency (EIA) has forecast that power generation growth in the country up to 2027 will be driven predominantly by solar capacity additions, in its latest short-term ...

Using the build-out of solar energy as a case study, this report evaluates the factors that hinder--and help--the transition to renewable energy, with the aim of bringing nuance and empirical ...
