The Lithium-Ion battery has its beginnings in the 1970's, when British chemist M. Stanley Whittingham proposed creating an energy-storage device using lithium cells.

Before lithium-ion: 1960-1975Commercialization in portable applications: 1991-2006Precommercial development: 1974-1990Commercialization in automotive applications: 2006-todayMarketo 1974: Besenhard was the first to show reversibility of Li-ion intercalation into graphite anodes, using organic solvents, including carbonate solvents. o 1976: Stanley Whittingham and his colleagues at Exxon demonstrated what can be considered the first rechargeable "lithium-ion battery", although not a single component in this design was used in commercial lithium-ion batteries later. Whittingham's cell was assembled in a charged state using lithium aluminum alloy as the negode, LiBPh₄ (lithium tetraphenylborate

The U.S. has 431 operational battery energy storage projects, 8 using lead-acid, lithium-ion, nickel-based, sodium-based, and flow batteries. 10 These projects totaled 27 GW of rated power in 2024, 8 ...

Dr. Goodenough's work laid the foundation for the commercialization of lithium-ion batteries. The release of the first commercially successful lithium-ion battery by Sony in 1991, which ...

Lithium batteries are electrochemical devices that are widely used as power sources. This history of their development focuses on the original development of lithium-ion batteries.

1989:The recall of Moli Energy cells, comprising lithium metal, abruptly changed researchers' perception in favor of heavier but safer dual-intercalation (i.e. lithium-ion rather than lithium-metal) batteries.

Did you know the first commercial lithium-ion battery emerged in 1991? While modern projects like Tesla's Hornsdale Power Reserve grab headlines, understanding the earliest lithium battery energy ...

Understanding this background is crucial to understanding where technology is at the moment and where it
