China implemented a solar photovoltaic (PV) poverty alleviation (PVPA) policy of building nearly 0.24 million PVPA power plants in 2014-2020 to fight poverty.

Innovative technological advancements are constantly being made in the solar energy sector to address energy poverty. Affordable and efficient solar panels and systems are being ...

To synergize climate mitigation with poverty alleviation, China has implemented photovoltaic poverty alleviation (PVPA) projects since 2014, with Anhui Province being among the initial pilot regions.

The PV poverty alleviation effect is stronger in poorer regions, particularly in Eastern China. Our results are robust to alternative specifications and variable definitions.

Based on the results of 30 semi-structured interviews with village leaders and local government officials in Jinzhai County, China, we explore in-depth the development stages and the ...

This paper aims to reveal the state and bridge the gap in the solar PV and poverty (PV-PO) research field, by employing unique visualization methods for a scientometric review.

By the end of 2019, in China, the task of PPAP construction had been fully completed, with 26.36 million kWh of (PV) photovoltaic power plants having been built and 4.15 million households benefitting. This ...

A critical feature of China's poverty alleviation strategy is the prioritization of industrial poverty alleviation, particularly through the implementation of ten targeted programs, including photovoltaic (PV) poverty ...

This analysis used tracking data from households both with photovoltaic equipment installed and without in "S Town," Jiangsu Province, from 2017 to 2021. The results indicate that ...

The poverty alleviation photovoltaic panel is broken

Abstract Motivated by a widely practiced strategy to combine the growth of the solar energy sector with poverty mitigation, we propose stylized models of households selling extra solar ...
