How big is Australia's utility-scale solar sector?

SolarPower said Australia's utility-scale solar sector has seen "strong but fluctuating" growth, with 6.07 GW under construction or in planning. This is in addition to the 10.35 GW of operational utility-scale solar already connected to the NEM and the Wholesale Electricity Market (WEM).

Will Australia's solar sector grow in the next 5 years?

Australia's solar sector is poised for significant growth in the next five years with a new report projecting utility-scale PV will exceed 50 GW total capacity by 2030, up from about 10 GW current operational capacity.

How big is Australia's solar PV market?

Australia's solar PV market has grown rapidly in the past 10 years, with "more than 3.92 million residential installations and a total capacity exceeding 37.8 GW as of September 2024," SolarPower said.

Will Australia install 1 GW of solar per year?

The Australia market outlook forms part of SolarPower's broader annual report that suggests the world could be installing 1 TW of solar per year by the end of the decade. SolarPower said the world installed 600 GW of solar in 2024, with global cumulative PV capacity crossing the 2 TW milestone late in the year.

The Market Management System registration represents a critical milestone for utility-scale solar projects entering Australia's National Electricity Market (NEM). Both facilities are ...

January 2026 delivered another strong performance for solar energy generation in Australia's National Electricity Market (NEM), with both utility-scale and rooftop solar maintaining the ...

Preparing for Net Zero Australia's renewables credentials 4th-largest utility-scale storage market 1 With nearly 9 GW / 20 GWh utility battery capacity under construction or in operation 1

Australia's NEM hit a record high for the combined utility-scale solar PV and wind share in the electricity mix on 30 August.

The latest version of the BNEF New Energy Outlook for Australia shows investment in utility-scale solar declined to AUD 379 million (\$263 million) in the second half of 2025, down from ...

Utility-Scale Solar and Battery Projects Expand Australia continues to attract strong investment in renewable energy infrastructure, with new solar farms and battery energy storage ...

Analysis of Australia's 2025 energy trends: a 35% drop in utility-scale solar investment contrasts with booming rooftop solar and battery storage, highlighting challenges in meeting 2030 ...

According to data from the National Electricity Market (NEM), renewables including rooftop solar, utility-scale solar farms, wind power, and large batteries exceeded coal and gas generation ...

Australia's solar sector is poised for significant growth in the next five years with a new report projecting utility-scale PV will exceed 50 GW total capacity by 2030, up from about 10 GW ...

Australia's booming utility-scale solar industry may have already peaked, risking the country's lofty climate goals.
