Can a village adopt a solar power system?

Usually, only about 30% of households can adopt PV. To increase that percentage, the village would need to expand transformer capacity. The costs of that expansion get divided up and paid by later adopters. This raises their construction costs and creates an obstacle to adoption. It is another form of injustice.

Does community management influence household adoption of rooftop solar photovoltaics in rural China?

This paper examines inequality in household adoption of rooftop solar photovoltaics in rural China through a qualitative study of three villages. The Chinese government promotes distributed solar to drive low-carbon development. However, community management and China's institutional system influence unequal access.

How are case villages selected for a solar project in China?

This research utilizes a qualitative approach, collecting data through field observation and interviews. Case villages were selected based on two criteria: being early adopters of household solar with implementation experience, and inclusion in China's national solar promotion pilot program.

Where is the rooftop photovoltaic power plant located?
