It's the smarter way to manage our energy future. We've started installing advanced meters for new connections and to replace old meters. All up, we'll install 238,000 over the next three years. See what advanced meters ...

Advanced meters are digital electrical meters that transmit data to Western Power's systems. This allows remote monitoring of energy flows and detection of faults or supply issues.

Western Power will install 238,000 advanced meters as part of its routine meter replacement program, and for all new meters, aligning the utility with industry deployment across Australia and globally.

Western Power is introducing advanced metering infrastructure on the South West Interconnected System, unlocking future benefits including the ability to integrate more renewable energy ...

How does it work? Advanced Meters can be read remotely via RF technology, with the data sent to Western Power. Western Power then validates the metering data and sends it to Synergy the following business day. ...

Western Power is inviting registrations of interest from suitably qualified and experienced organisations to provide graffiti removal services across the South West Interconnected Network.

Advanced Meters are read daily. The data is sent wirelessly with state-of-the-art encryption to Western Power. This means estimated bills are (in most cases) significantly reduced.

A total of 238,000 advanced meters will be installed by utility Western Power on the state of Western Australia's South West Interconnected System over the next three years. The move will...

Western Power's advanced metering infrastructure predominantly uses radio frequency, supported by 4G technology. When communicating, the emissions from an advanced meter are less than those produced ...

Western power advanced meters

We're now installing advanced meters for all new and replacement meters across the network. By mid-2027 we will have installed over 1,200,000 advanced meters on our network. Most will be installed across the Perth
