What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home--it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How do I choose a solar inverter?

Knowing your array size allows you to choose an inverter that can handle that production efficiently--without over- or under-investing in capacity. The second step is understanding your system's DC-to-AC ratio, one of the most important metrics when sizing a solar inverter.

How many Watts should an inverter be?

Ideally at 80-110%, to compensate for panel overproduction in bright sunlight and to avoid compromising inverter efficiency. 2. Select an Appropriate Inverter Rating Here's how inverter sizes usually correlate:
Panels: 3,000-6,000W Inverter: 3,000W to 5,500W
Panels: 6,000-10,000W
