In 2022, the world added more new solar capacity than all other energy sources for electricity combined. Global energy generation from solar photovoltaic (PV) panels, which convert ...

In 2022, US small-scale rooftop solar saw a tenfold increase over the last decade, according to a new report - here's why and what needs to happen next.

In recent months, solar panel prices have experienced a notable increase after reaching a low point. This shift is influenced by various factors, including international market dynamics and ...

Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. The oversupply that helped to push prices down last year has eased ...

We're seeing advanced tech like TOPCon and HJT cells improve panel performance, and prices have dropped by over 80% in the last decade. In 2024, this trend continued. High-efficiency ...

Global solar power capacity skyrocketed in 2023, leading to a rapid acceleration of clean power revolution. The solar surge is not just about the remarkable growth in China, as more gigawatt ...

To call solar power's rise exponential is not hyperbole, but a statement of fact. Installed solar capacity doubles roughly every three years, and so grows ten-fold each decade.

Record growth is not experienced in all parts of the world, with 80% of installations concentrated in the top 10 markets - which disproportionately include advanced economies. Solar ...

The escalating costs associated with solar energy can be attributed not only to heightened demand but also to geopolitical factors, particularly tariffs targeting China.

Why did the photovoltaic panels rise so much

Benefitting from favorable policies and declining costs of modules, photovoltaic solar installation has grown consistently. [1][2] In 2023, China added 60% of the world's new capacity. [3] Between 1992 ...
