The U.S. solar market slowed in Q2 2025 with installations down 24%. Policy uncertainty and regulatory delays pose risks to long-term solar growth.

The increase in natural gas-fired generation is slower than the overall increase in total U.S. generation, and so natural gas's share of total power generation falls to 39% in 2027 compared ...

But in many cases, misinformation and misunderstandings about ...

In this guide, we'll break down the eight most common reasons for low solar power generation. You'll learn what each issue looks like in real life and what to do next to restore your system's performance.

But in many cases, misinformation and misunderstandings about solar power and wind energy have delayed their adoption. Now, experts from Colorado have busted two of the most ...

Most quality solar panels degrade at just 0.5% to 0.8% per year, meaning they'll still produce about 85% of their original output after 25 years. This remarkably slow decline, backed by ...

Discover why your solar panels are underperforming and how to fix it. Expert troubleshooting guide with step-by-step solutions, safety tips, and cost estimates.

In summation, solar power generation faces numerous challenges, including significant initial costs, geographic limitations, weather variability, energy storage issues, infrastructural ...

Solar is more accessible than ever, making it a more attractive energy option for businesses, residents, and utilities. However, as more solar panels are produced, the chances of ...

This article explores why the solar industry is struggling, what it means for the clean energy transition, and how governments and homeowners can adapt. From climate impacts to ...

Why is solar power generation slower

Declines in residential solar markets have been a hit to the industry--but its foundation is strong. We look at why the future is still bright for solar.
