Wind turbines generated a new high of 22,711 megawatts on November 11, providing enough power for 22 million homes. From reproductive rights to climate change to Big Tech, The ...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, as data from the US ...

Solar and wind power drove global renewable electricity generation to a record-breaking 4,748 TWh, marking a 13% increase from the previous year.

Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources.

Global wind generation reached a record high of 2,494 TWh in 2024, up 182 TWh (+7.9 percent) from 2023, according to Ember report. Wind's share in the global electricity mix rose to 8.1 ...

U.S. wind generation hit a record high during April 2024, according to a Aug. 13 report published by the U.S. Energy Information Administration. In addition, electricity produced as a result ...

Wind installations in the United States produced 45.9 gigawatt-hours (GWh) of electricity in March 2024, compared with 38.4 GWh from coal-fired power plants. In April 2024, coal-fired ...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

New research has revealed that global wind power installations reached an all-time high in 2024, with 117 gigawatts (GW) of new capacity added.
