It mainly focuses on the construction of large-scale wind power and photovoltaic bases, and is equipped with corresponding thermal power dispatching facilities.

From a sand dune in Zhongwei, northwest China's Ningxia Hui Autonomous Region, neat rows of photovoltaic panels stretch across the Tengger Desert, transforming the golden sands into a ...

Today, covering an area of 609 square kilometers, this solar power base boasts a power generation capacity of 8,430 megawatts, making it the largest in the world, according to Qeyang, ...

The aim is to set a pioneering example for peaking power sources at "Shagehuang" base, making it the "first batch, first location, and first set" of model units.

Successful grid connection for entrance into a new stage of self-generation and self-consumption of green electricity

Primarily focusing on large-scale wind and solar power development with a total installed capacity of 13 million kW, the project, the country's first in response to the government's ambitions to ...

As one of China's first large-scale renewable energy bases with a capacity exceeding 10 gigawatts, the base is set to develop eight gigawatts of solar power, four gigawatts of wind power, ...

The construction and equipment testing of the new energy base project phase 1 were completed at the end of March. After connected to the grid, the project can provide clean electricity of ...

It is the first one of China's planned solar and wind power projects to be built in the Gobi Desert as well as other desert or arid areas in the country. The project was designed to run on wind ...
